

Equipping Services in Health

Underpinned by professional Project Management methodologies (PRINCE2®), the experience gained from engagement in a significant number of projects in Health, places the MTS equipping team at the forefront of the market.

With the application of our expertise in addressing equipping issues, all options can be comprehensively explored ensuring that the final equipping solution is affordable, fully integrated into the design and deliverable for all project stakeholders.

Equipping Consultancy

Working closely with all project stakeholders, we can assist in ensuring final room design will support clinical and non-clinical function irrespective of responsibility for procurement thereby significantly reducing design risk.

Our consultancy portfolio which involves us working closely with all project stakeholders such as Clinical Users, Architects and Planners, includes:

- Preparing the equipping element for outline business case preparation
- Interpretation of output specifications, schedules of accommodation to develop generic equipment schedules
- Equipment interface to major equipment suppliers
- Data conversion and code mapping
- Room data sheet management and iteration including the development of template rooms
- Room design/development
- Utilising User group meetings to iterate room data sheets and develop equipment design specifications
- Evaluating procurement options (i.e. MES, leasing, traditional procurement)
- Produce an Equipment Responsibilities Matrix (ERM)
- Conduct design team audits and reports for specialist areas
- Contractual and commercial expertise in Managed Equipment Services.

Procurement

MTS will develop procurement lists from the initial design work.

To ensure equipping budgets are kept within targets, an assessment of existing assets and whether they can be transferred will need to be performed in addition to the development of detailed equipment specifications.

Our procurement services portfolio includes:

- Equipment audit and condition survey of existing assets
- Equipment pricing & BOQ development
- Equipment procurement specifications
- Production of procurement catalogues
- Lifecycle costing
- Option appraisal on procurement routes
- Price negotiation

Our procurement services are underpinned through the use of our propriety data management (EQUIP) system which is used to manage the procurement process from the analysis of initial Client data through to management of the procurement process from obtaining quotations and evaluating tenders through to raising order requisitions and mapping these to their final destination.

Project Mobilisation

We understand the mobilisation phase of a project to be the period from the practical completion of a new build or refurbishment through to actual service delivery. The priority is ensuring a facility is fully operational at the point of opening its doors.

Our mobilisation provision encompasses all the necessary logistics management activities associated with equipping a facility in line with the design and construction programme.

These activities are:

- Management of transferring assets
- Managing final room data sheet contents and obtaining room signoff
- Installation, commissioning and acceptance testing
- Disposal of non-transferring assets
- Post installation audits
- Updating of asset database

Equipment Management

Essential to the smooth running of a new facility will be its equipment management infrastructure.

Within the project environment, continuity of services and infrastructure is essential whilst existing facilities are decommissioned and new buildings become operational.

MTS can help you to identify the most appropriate equipment management requirements for your site with the emphasis being on providing a holistic service encompassing:

- Conducting asset audits, reviews and assessments
- Development of customised support models
- Assessment of current equipment management provision
- Equipment related risk management and User training
- Cost improvement consultancy with maintenance mix assessment
- Provision of Asset Management software
- Setting up and running equipment libraries

About MTS

- We are the largest Health and Education Equipment Advisors in the UK.
- Our Consultancy has brought together a team of 20 personnel which has been providing high levels of support for over 25 years.
- Our equipping consultancy includes asset auditing and reporting, equipment scheduling, architectural interfacing, equipment specifications and procurement programme/project management and equipment mobilisation, commissioning and installation.
- Our team are working with Partners in PFI, P2 I⁺, ISTC's, Mental Health, PCTs and Community Health.
